TORAH CODES BASICS
AN INTRODUCTION TO HOW TO READ THE CODE

THE TORAH CODE REVEALS THAT OBAMA STAYED AWAY FROM PARIS BECAUSE HE'S ANTISEMITIC.

PRES OBAMA, SECY JOHN KERRY DO NOT JOIN WORLD LEADERS AT PARIS RALLY

FOX NEWS.com

Term	Translation	Skip	Start	End
אנטישמי	ANTISEMITIC	79344	Deuteronomy 1:27 Letter 52	Exodus 27:16 Letter 16
אובמה	OBAMA	79344	Deuteronomy 16:3 Letter 4	Deuteronomy 26:3 Letter 48
עלנפשמת	UNTO A DEAD BODY	1	Numbers 6:6 Letter 16	Numbers 6:6 Letter 22
לאיבא	HE SHALL NOT COME	1	Numbers 6:6 Letter 23	Numbers 6:6 Letter 27
פריסטמא	PARIS IS UNCLEAN	1	Leviticus 11:5 Letter 28	Leviticus 11:5 Letter 34

The ELS reference is 79,344 characters between rows.
The wrapped matrix starts at Deuteronomy 1:27 Letter 35 and ends at Leviticus 11:5 Letter 34.
The matrix spans 1,428,210 characters of the surface text. It has 19 rows, 18 columns and of 342 characters.

by
Barry Steven Roffman

THE TORAH CODE HYPOTHESIS

- Items that are historically related can be found at an Equidistant Letter Sequence (ELS) "encoded" together in Torah matrices that are smaller than similar matrices produced in "control texts."

- It's difficult to make predictions because you usually can't know ahead of time which terms will be key terms to search for.

Torah Code Basics

- The first term sought is the "axis term."
- The axis term usually appears vertically.
- Hebrew is read right to left.
- The code is really based on a spiraling cylinder.
- The ELS or "skip" of the axis term = the number of letters on each line.

What is a Matrix?

- A matrix shows a portion of the cylinder's surface area around the axis term.

- It holds *a priori* terms found near an axis term and *a posteriori* terms noticed after the matrix was produced.

- *A priori* terms are believed related to the axis term. They are sought before being found. Probabilities can be calculated for them.

- *A posteriori* terms are noticed after the matrix was produced. Probabilities are usually inappropriate.

WHAT IS EQUIDISTANT LETTER SEQUENCE (ELS or "*Skip*")?

● Programs can find phrases in text that have an equal number of letters between all letters of the phrases. Example: "The **M**an walk**E**d out th**E** door in**T**o the st**A**nds tha**T** seated **8**,000 fans." Some people would say ***Meet at 8*** is encoded at skip 7. But it's only true if an author deliberately wrote the sentence to hide the phrase. If not, the phrase is only due to chance. How can we tell encoding from chance? We are often left to statistical analysis and rigorous examination of procedures used by the finder.

● Note: the first ELS found (axis term) is shown with a number of letters on each line equal to the axis term skip, unless a "row skip" (explained later) is used. Spaces between words are always removed. Thus the ***Meet at 8* phrase** would be shown as follows (although the really proper way to show it would be to wrap it into a cylinder with a circumference of 7 letters:

M	A	N	W	A	L	K
E	D	O	U	T	T	H
E	D	O	O	R	I	N
T	O	T	H	E	S	T
A	N	D	S	T	H	A
T	S	E	A	T	E	D
8	0	0	0	F	A	N
S						

What is "Snooping?"

- Looking at letters in sequence with and directly ahead of or behind axis terms, a priori terms or a posteriori terms.

- The snooped letters add words to the above terms, and possibly value to what was originally sought.

- Probabilities are generally inappropriate for snooped terms.

"Snooping" often yields long ELSs, but are they deliberate or random gibberish?

Bible Code Digest Example: *

- "Good Hebrew" : **Let the oppressed by (be?) congratulated, saturated from Him at 2001, and let them be guarded by the echo of the Father's son. Supported by the U.S. I will see but he has the knowledge. (48-letter ELS in Hebrew)**

* (http://www.biblecodedigest.com/page.php/41)

What kind of long ELSs have Israeli Code experiments discovered?

Destruction I wll name (call) you: Cursed is Bin Laden and revenge is for the Messiah (29-letter ELS).

Bin Laden is the axis term sought, the rest was snooped by Dr. Haralick's computer program and by Art Levitt and his team (Nachum Bombach, Harold Gans, Leib Schwartzman and Chaim Stal).

O'Neill, the man who actually killed Bin Laden, was found by Barry Roffman

In order to maintain the possibility of free will, it's conceivable that more than one outcome is encoded for each situation. Physicists offer the possibility of parallel universes to allow for different outcomes.

Perhaps in one universe revenge is for the Messiah, but in our universe revenge against Bin Laden was from Robert O'NEILL as is indicated on this matrix.

Term	Translation	Skip	Start	End
חרמהא	DESTRUCTION	6598	Genesis 9:9.33	Genesis 27:19.12
אככב	I WILL NAME YOU	-6598	Genesis 42:9.61	Genesis 31:1.31
ארור בין לאדן	CURSED IS BIN LADEN	6598	Genesis 42:9.61	Exodus 34:7.58
ונקמהל	AND REVENGE BELONGS TO THE	6598	Exodus 37:26.41	Leviticus 18:2.5
משיח	MESSIAH	6598	Leviticus 22:21.52	Numbers 5:4.34
מונילל	FROM O'NEILL	6599	Leviticus 11:9.39	Numbers 2:1.11

Levitt Team Experiment

- 614,400 Bible-scrambled Control Texts

- 13,400 Bin Laden phrases in Control

- 29 letters and average word length at least 29/6

- The Bin Laden phrase from Torah was recognized intelligible by only 7 out of 27 reviewers.

- A problem segment "I will call you" is Biblical Hebrew, not modern Hebrew but it is valid.

- The probability that there is a text with an ELS phrase involving Bin Laden that is at least as intelligible as the one found in the Torah is less than 6/1000,000.

What is wrapped or unwrapped Torah?

- In unwrapped Torah the computer makes one pass through Torah.

- When Jews finish reading the Torah we immediately go from the last word of Deuteronomy to the first word of Genesis.

- A wrapped search likewise continues from the end of Deuteronomy into at least one more pass through Torah starting with Genesis 1:1.

- A wrapped Code has a greater data carrying capacity.

- Only CodeFinder software offers a wrapped search.

In *Sifra d'Tzniusa,* the Gaon wrote:

: The rule is that all that was is and will be, until the end of time, is included in the Torah from In the beginning... to before the eyes of all Israel... And not merely in a general sense, but including the details of every species and every person individually, and the most minute details of his life from the day of his birth until his death."

First Problem - There are many ways to include such information.

- ELS is one way.

- Gematria is another. **(Assign numerical values to each letter).**

- First letter of each word is a third way.

- Atbash is a 4th way, switching top and bottom line letters as follows:

א	ב	ג	ד	ה	ו	ז	ח	ט	י	כ
ת	ש	ר	ק	צ	פ	ע	ס	נ	מ	ל

13

Even Cohen Gadol Eli misread the Urim v 'Tumim light patterns, seeing שכרה, *a drunken woman*, instead of כשרה, *a righteous woman* regarding Hannah, mother of the prophet Samuel.

Many ways to "derive" information means that many mistakes are possible.

Second Problem

- Without use of proper statistical analysis or scientific protocols, Christian web sites mushroomed with an abundance of "Codes" matrices backing their faith.

- **The Torah itself is a name of God. To mislead the public through use of Torah Codes is to take the name of God in vain.**

- **Ignorant Jews might be persuaded to apostatize based on insignificant matrices.**

The Witztum, Rosenberg, Rips (WRR) study showed there is good evidence for Torah encoding but….

- Jews snoop Jewish phrases, and Christians snoop Christian phrases

- The snooper gets to decide how to split word phrases.

- Snoopers seldom pay attention to similar results in control texts.

Still, code critics have not been fair in criticism of good Code studies.

Dr. McKay has not been fair in criticism of good Code studies

Example:
his comparison of a Kennedy find in Moby Dick with Yitzchak Rabin in Torah

What doesn't McKay tell us?

1. Moby Dick is a book about killing.
2. He has to use a row split of 4 to show *killed.*
3. Kennedy occurs at an ELS 58 times in Moby Dick
4. There is no match with *killed* for 5 shorter ELSs of *Kennedy*
5. *Kennedy* and *Killed* do not cross or share letters

What is row split?

- If *Ark of the Covenant* (ארונברת) has skip 306, **without** row split, as axis term its letters appear at right with 306 letters per line:

Zephon

Baal Zephon

- But with a row split of 2, we see a bigger picture with 153 letters per line:

Note: Baal Zephon has 2 Spellings in Torah

Baal

Ark of the Covenant

20

ROW SPLIT FACTS

- **Positive:**
  - The larger the row split, the more terms you can match with an axis term.
- **Negative:**
  - The larger the row split, the less significant the matches with an axis term will be.

What doesn't McKay tell us about the Rabin matrix?

1. No row split is needed in unwrapped Torah.
2. *Yitzchak Rabin* only occurs once in unwrapped Torah.
3. The *murder* word directly crosses and shares a letter with Rabin.
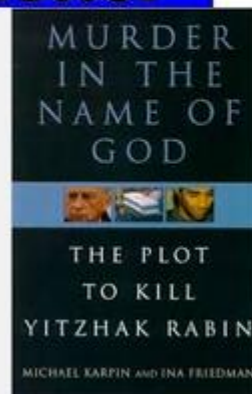

Yitzchak Rabin

Killer will kill

לחמהיהצהוית
רוצחאשרירצח
תהצרעהישלחי
תמשמרתווחקת
יאכמארדצמצרי
אשהוסקלתמבא
הנימבנילויכ
תואבותעלבני

Not all of McKay's Codes critiques are fallacious:

- He points out how many transliterations for names can cloud objectivity.

A synagogue of Rabbi Abulafia in Tiberias has 4 different spellings of the same name on the building!

Photographs by permission of Dror Bar-Natan, October 2000.

The Goan might be right but...

- His proclamation is subject to widespread misuse

- It presumes that every detail of every life is worth writing into a document that has a set history to tell and 613 laws to present.

- It's easier to program fates in accordance with set Torah text than to write each fate into the text ahead of time.

- **If the above is true, the name chosen for a person then plays a major role in which Codes fit their fates.**

- **In a discussion of names and prophecy, the Talmud (Berachos 7b) states that God inspires parents to select a name that has significance unknown to them. Many years later, the aptness of the name becomes apparent to all.**

If some fates are dictated by name, what might be deliberately encoded?

CLINTON MATRIX POSITIVES:

1. NO ROW SPLIT NEEDED

2. MATRIX IS UNWRAPPED TORAH.

CLINTON MATRIX NEGATIVES:

1. *CLINTON* IS NOT AT MINIMUM ELS, IT IS AT 4TH SHORTEST ELS.

2. ONLY *PRESIDENT* WAS SOUGHT A PRIORI. ALL OTHER TERMS WERE A POSTERIORI.

HIGH FREQUENCY AXIS TERMS MEAN:

▸ Greater probability to find something related in crossing terms.

▸ Greater probability to match axis term with a priori terms

▸ Lower statistical significance for a matrix.

▸ The higher the frequency of an axis term ELS, the more important it is that the axis term be at minimum ELS or near minimum ELS.

What is least likely to be encoded?

"the most minute details of life from the day of birth until death."

David Roffman looked to see if 48 Alameda, California Middle School Students were encoded with *Alameda*. He found:

- Smaller (better) average matrix sizes for Torah (2,378 letters) than Control (3,043 letters)

- Better (lower) range of matrix sizes in Torah, but

- 51 smaller matrices in the Control, only 45 smaller matrices in the Torah

- The smallest probability for any matrix was .09 which is not significant (Dr. Haralick did a Monte Carlo experiment to assign this value)

- Data suggests this level of encoding does not exist.

David also looked to see if 42 U.S. presidents were encoded. He found:

- 26 Presidents had smaller matrices in the Torah, 16 in the Control of *CodeFinder* using spellings from an Israeli Encyclopedia. The probability for results this good was .0775 (not significant).

- However, Dr. Robert Haralick then performed a related Monte Carlo permutation experiment using up to 16 alternate, but valid transliterations. He achieved a probability that was only .5/10,000, the smallest p-value possible in a 10,000 trial experiment!

A MAJOR PURPOSE OF THE CODES APPEARS TO BE ENCODING OF MAPS THAT POINT TO WHERE THE ARK OF THE COVENANT WAS BURIED.

If these maps are right they may end the differences between Jew and Muslims
